

Clearingworks - Open Payments Platform

An Open Platform for Rapid Development of Payment or Payment-Related Applications

Clearingworks – Open Platform enables your team to quickly build applications in a fraction of the time required for traditional software development process....and at a fraction of the cost.

Key Questions to Consider when Adopting an Open Platform Approach

When you are evaluating your options for rapid application development you should consider the following key questions:

- Does your organization face barriers reaching new customers?
- Are you missing out on key market opportunities?
- Is a lack of technical resources or competing projects inhibiting your ability to place revenue producing systems into production?
- Is there a unique business process or need that is not solved by existing systems?
- Is the deployment of an open platform a strategic business objective?

U.S. Dataworks, Inc understands your situation and we have a solution that allows your development team to break through these barriers. Clearingworks is an open platform architected for rapid development of enterprise-class applications.

Explore the Power of Real-time API Development

Imagine meeting all your current project deadlines, or capitalizing on an emerging market trend, such as real-time payments, because you have the Clearingworks – Open Platform powering your internal application development. Through a combination of public and private APIs you can streamline the integration process for any new applications.

Key Features

- Graphical workflow tool allows your developers to create custom workflows, add new workflow steps and integration to external systems within a given workflow process with no code writing required.
- Powerful rules-based workflow engine allows business rules to be added, changed or removed without compromising system integrity.
- Role-based security module allows roles to be created and modified. In addition, roles can be tailored to very specific elements, including fields, screens, reports and actions.
- Real-time metrics capture performance statistics, tracks system events and logs user activity.
- Integrated Alerts and Notifications allow customer alerts and notifications to be integrated into any workflow process, system activity or metric, including built in anomaly detection for usual activity.
- App architecture allows your developers to build and maintain numerous business-specific Apps.
- Real-time transactional data is optimized for long-term data archival and warehousing.

U.S. Dataworks, Inc. successfully used the Open Payments Platform to build and expedite popular payment solutions for top ten financial institutions and multi-national corporations. We regularly win business based on our ability to deliver quality solutions on-time and meeting the specific requirements of our clients for secure enterprise-class applications.
